Electronic Hospital Lockers

The storage solution for your
hospital staff

Lockers for your hospital staff.

The storage solution for hospital staff

Ubilock has many functions that optimize the use and management of the electronic lockers. Users can use the lockers flexibly or can be assigned to a permanent locker. Because employees in a healthcare institution or hospital regularly work in shifts, the lockers can be provided with time settings to prevent the claim of a locker. The administrator has all rights to apply these types of time settings or view the use / history of the lockers.

In hospitals or care institutions, good hygiene is of paramount importance. Partly because of this aspect, the locker system can be equipped with a function that allows cleaning scheduling to be set. The administrator can indicate via the system that a cleaning must be scheduled, so that the designated lockers will be out of use during the specified period, so that a cleaning team can clean the lockers within this period.

Our locker system is so extensive that you can choose which functions and options the lockers should have. The most common and useful functions for hospital lockers are listed in the features at the bottom of this page. However, it is possible to apply any conceivable functionality to our locker system. So you get a complete locker system with lockers of your choice that are completely to your liking.

Hassle-free management of personnel lockers

The ubilock locker system is the solution if you are looking for a reliable locker system for hospital employees. Our electronic locker system can be equipped with many different functions and options as desired. Olssen is happy to provide you with a solution with easy management and safe use for your employees.

High-tech lockers in the look you want

In addition to our advanced locker system, we also offer a wide range of locker cabinets in which this system can be implemented. This allows us to completely unburden you around the purchase of your pharmacy lockers.

Schedule your cleaning of the lockers

Can be linked to your existing badge system.

Suitable for changing and regular users

Easy management in the cloud.

Safe lockers for the hospital staff of the Reinier de Graaf Hospital

The care staff of the Reinier de Graaf Hospital use these lockers by offering their personal staff card at a terminal. A free, nearest locker will open randomly. The screen shows the locker number, the name of the user and the remaining life of the locker. The locker indicates the status of the locker with a bright LED light (red = occupied, green = free).
