

A row of grey electronic luggage lockers in a modern setting. The lockers are arranged in a long line, each with a small digital display and a handle. In the foreground, there is a wooden planter box filled with grey gravel. A green plant is visible on the left side of the frame. The ceiling is a grid of recessed lights.

OLSSSEN®

Electronic Luggage Lockers

Let visitors safely store
their luggage

24/7 lockers with payment system.

Luggage locker system

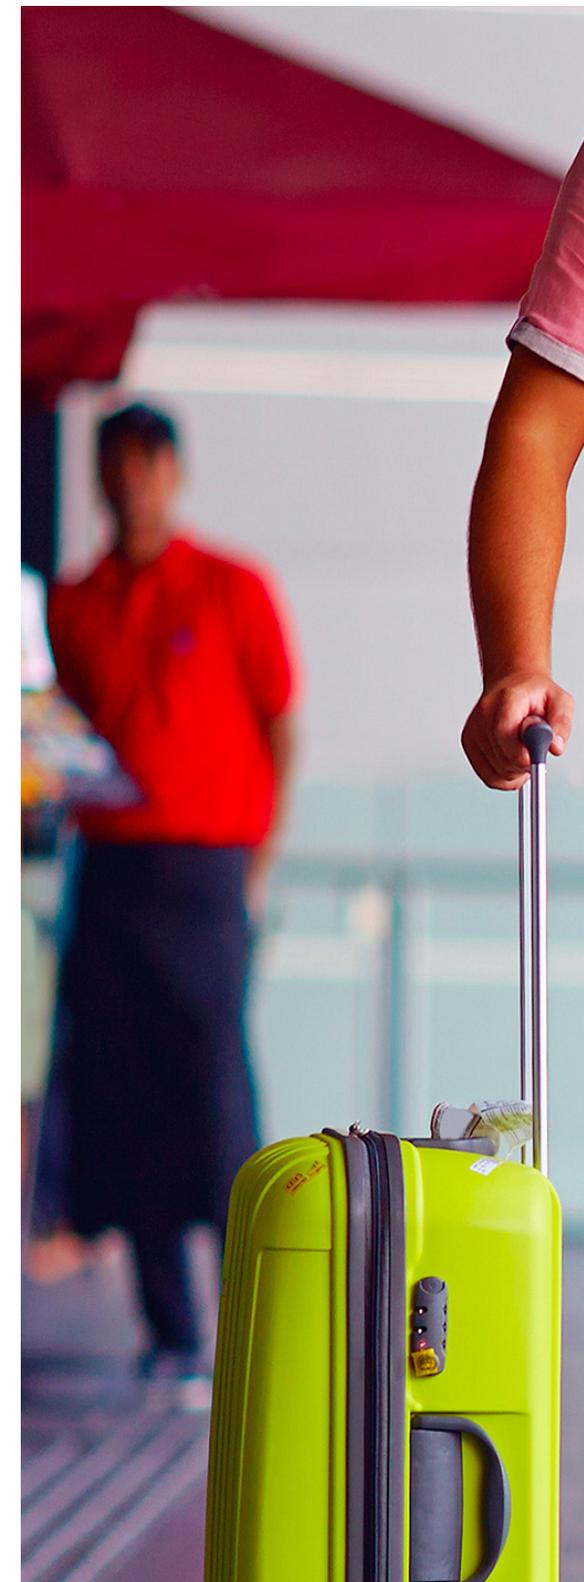

Every day, many passengers have to wait a long time at airports before their plane leaves. When these passengers carry a lot of luggage, electronic baggage lockers are the solution to offer these people an extra service.

Schiphol Airport has chosen Olssen's electronic baggage lockers to offer this extra service to its passengers. Our locker system has all the functions and possibilities to provide administrators, but especially users, with a locker system with optimum ease of use.

Our baggage lockers not only come into their own at airports, but also in many other public spaces. Think of theme parks, train stations, hotels, museums etc.

The users can rent a locker for a (predetermined) time for free or for a fee. Payment can be made by cash or pin at the terminal or in advance via a webshop.

As an administrator, you can log in to the online platform at any time. Administrators can grant rights to persons via the online platform, for example the facility employee who has to clean lockers. Lockers can also be opened from the online platform if they need to be checked. Lockers can be scheduled for cleaning from the software. The lockers are then blocked for reservation so that they can be cleaned without any tenants' belongings.

Luggage Lockers

With electronic luggage lockers, tourists / passengers can safely and easily store their personal items for a certain period of time. With such a locker system, users can enjoy the free time they have without worrying about having to take their luggage or bags with them. Due to the multilingualism of the locker system, all tourists can use your luggage lockers.

PCI Compliant

Our hardware and software can be delivered PCI COMPLIANT. This is an international security standard and was developed by a partnership of credit card companies that establishes guidelines for keeping card and transaction data safe. When you choose PCI compliant, your customers' card details are optimally protected and you reduce the risk of image damage and high fines from credit card companies.

Reserve in advance via webshop or website.

Cloud Management for managers

PCI Compliant

Innovative luggage lockers for Schiphol Airport

Schiphol Airport was looking for an innovative locker system whereby passengers who have to wait a long time for their flight can temporarily rent a locker for a fee.

The lockers are placed at various locations at Schiphol. As a result, there is always a locker nearby where passengers can store their luggage.

Users can easily pay by debit or credit card. The lockers are equipped with IR detection so that a locker automatically pops open if something is in it, but the locker is not rented. This way the user knows that there is still something in it or that it has not yet been paid.

The supplied Locker Management Software and hardware (locks, terminal etc.) is PCI DSS Compliant.
